

Abstract

**METHOD OF, AND SYSTEM, FOR DELIVERING INFORMATION SERVICES
TO A DOMESTIC USER**

5

A message delivery system for delivering information services to a user having a display apparatus, such as a teletext television receiver (20), wherein an encrypted message including commands is transmitted as a SMS message in a pre-assigned teletext page. An enabled television receiver includes a client (22) for parsing the commands in the SMS message and uses the commands for conditioning the receiver as required in order to display the messages in a format similar to text signals.
